Dogs, Cats, and Horses love Reiki, I have been privileged to work with these wonderful animals, and I know how much they love their Reiki sessions.

I would like to talk about our special friends; the animals and pets we all love. It doesn't matter what pet you have, Dog, Cat, Horse or Snake. Reiki will work for them.

Those skeptical about complementary medicine will usually attribute any beneficial effect to the placebo response. "If I believe strongly enough that Reiki (or whatever) will make me better" then the likelihood is that better you will be!

But the same argument cannot apply to animals that can have no expectations one way or another about whether a particular treatment will work, and so, the placebo response cannot apply. Hence, where alternative or complementary remedies do work - the effect must be genuine. I have seen dogs, cats and bigger animals relax and improve when treated with Reiki: I love to work with the animals, and if you have pets of any kind, they will respond wonderfully to Reiki treatments.

I know some veterinary surgeries do have complimentary healing practitioners on their books. And like doctors, the Vets are starting to realise that Reiki can help their patients too.

All animals benefit from Energy Healing, and of course that is exactly what Reiki is. Reiki is quite an extraordinary force, Reiki flows through the practitioner into your pet and makes them extremely relaxed. Reiki energy focuses precisely on the life power, or uncontaminated, wholesome energy. By means of the channeling force from us to the recipient, the distressed areas undergo revitalization. This revitalisation is nothing else but 'Life Force'.

The entire beneficial amount of positive thinking and feelings, conveyed to the recipient (your beloved pet) translates into light. This light adds to the pulsations of life flow energy, in this manner life force runs more rapidly, but more calmly and consistently.

One of the supreme rewards of a Reiki alternative treatment (for you and your pet) is in the significant decrease of stress. You know when your pet is suffering stress or upset, especially if they have had to have surgery, or other treatments that mean a visit to the vets. Recovery from surgery can be quite surprising, especially when the treatments begins some weeks prior to the scheduled operation. Then you carry on the Reiki after their treatment and it all comes together to help and improve after-effects and recovery time. We know that Reiki is a particular type of delicate energy transfer. In the process, the healing has effect when the therapist puts his or her hands on or above the animal that is being treated. In this way, a relationship takes place between the patient and an immeasurable spring of life energy. This sort of force is an exceptionally potent one, yet is incredibly kind and soothing.

If you would like to help the worlds animals, (and in some countries they badly need lots of help) including UK. and USA. I'm afraid. In your minds eye see the animals who you would like to send healing and love too, and see it going to them as a stream of light. The endangered sea-life need all the help they can get too. Not many of us are blessed to give hands-on-healing to Whales and Dolphins, but we can send love and Reiki to to them. We just have to think about a pod of Whales or Dolphins swimming with joy in our

---

oceans, and send them our loving and healing thoughts.

You might be one of those lucky people who live where you can see the pods swimming, how wonderful for you. As you watch them playing, send your loving thoughts to them, and you may be surprised at their reactions. Reiki is a secure and preferable manner of coping with a variety of complications. It in no way would upset your pet. There are absolutely no contraindications with Reiki for human patients or animals. Reiki relaxes your body and mind. so your pet will feel wonderful. Even very small animals can accept Reiki, your little mouse or hamster will benefit from a little hands-on healing.

---

How to ease any conditions your pet may have without drugs, side effects or surgery, and in many cases, not even a visit to the Vets. Make your beloved pets life more enjoyable and meaningful.

Margaret Ann Jones.
